Top 10 Advantages of the NDS ERP Solution

PRICE

At NDS Systems, our business philosophy hinges on enabling our ERP customers to invest in products and services that improve and grow their business, not just selling them the right to use the software. We believe adaptation, utilization, and performance is the most important investments that a company should be making in its acquisition of an ERP system. NDS Systems provides the most affordable ERP suite, enabling NDS ERP clients to progressively scale up, activating modules and features when needed with NO additional user license cost and NO escalating product support expense.

ORACLE TECHNOLOGY

The NDS ERP software is an Oracle-based solution that is fully scalable from a single user to thousands of users. Oracle was the first commercially available relational database product, and it remains the number one choice for enterprises and organizations looking to implement business-critical, scalable solutions.

In today's world-wide competitive markets, appropriate and timely information is imperative. The combination of NDS ERP Software and Oracle technology offers the flexibility and visibility into critical management information that facilitates informed decisions and actions throughout the enterprise. NDS Systems and Oracle deliver an optimum return on your information investment.

SOURCE CODE INCLUDED

NDS Systems supplies the source code upon request. Since NDS uses Oracle Technology, there are a large number of programmers in the Oracle community that can manage, add, and change code in the NDS software. Check the NDS License for the conditions on the use of the source code.

DESIGNED INTEGRATION

From conception, the NDS ERP Solution was designed to work together, making the software considerably easier to implement, manage and use. This integration works to your advantage by providing the synchronization and centralization of your data that affords automated processes and enables access to accurate and precise data in real-time by anyone who needs it, increasing communication and information sharing throughout your entire company.

NEW FEATURES ADDED REGULARLY

The NDS ERP Solution is a constantly evolving product. New features and functionality are driven by customer requests. Providing that other NDS customers can benefit from the new options, NDS will make custom code a standard part of the NDS software, eliminating the extra cost in upgrading and maintaining custom forms.

REAL-TIME SOLUTIONS

USER CONFIGURED

The user configured settings available in NDS Applications allow for intuitive configuration of the ERP system, providing faster implementation of your business solution. As your business evolves, these user-configured settings can be modified to accommodate changes in your business processes without the need to write new code.

RULES-BASED GENERAL LEDGER

Our rules-based GL posting interface provides a great deal of flexibility when posting system transactions, exceeding the options of most other systems. For example, many systems require that an inventory item be assigned a specific revenue, cost and inventory GL account. Using NDS rules-based postings, the GL accounts can be determined by the attributes of the item itself, the customer or vendor attributes, or even parts of the sales order, allowing the revenue posting, for example, to go to one of many different GL accounts according to the rules and priorities established.

INTEGRATED ORDER CONFIGURATOR

Whether you need simple guided selling for your products or complex validation through the use of constraints and attributes, the NDS ERP Configurator can handle it. The tight integration of the application enables companies to efficiently quote, sell and process orders for configurable, multi-option, and customizable products and services. NDS customers are able to increase revenues while reducing costs by automating much of the sales, order entry, and engineering processes.

FORECASTING & ADVANCED PLANNING TOOLS

When used in conjunction with your industry knowledge, the statistical forecasting and advanced planning tools that reside in the NDS ERP application can help you to maintain proper inventory levels and reduce or eliminate inventory shortages. The NDS ERP Solution offers Statistical Forecasting, Master Production Scheduling (MPS), Material Requirements Planning (MRP), Reorder Point, and the latest NDS planning tool - Proxy Item Planning. (Also known as Spec-Controlled Item Planning)

MULTIPLE MANUFACTURING & DISTRIBUTION MODELS

The NDS ERP Solution supports multiple manufacturing and distribution models. For distributors, NDS supports the Buy, Hold, Sell, the Sell, Source, Ship models, and drop shipping. For manufacturers, NDS supports build-to-stock, build-to-order, Just-In-Time/Repetitive, re-manufacturing and engineer-to-order. Any of these can be used as a single model or in combination with multiple models.
