## REAL-TIME SOLUTIONS

NOVEMBER 2007

### Replenish with Ease and Options

We've added new options to our inventory replenishment program and made it easier than ever to move the necessary inventory to the necessary locations. The entire process from setup to executing the inventory moves can be performed in program ICRC, Inventory Replenishment, through a series of tabs, incredibly simplifying your inventory replenishment process.

On the Parameters Tab, our new options include the following: Item locations can be selected according to the oldest date or the smallest quantity, sales orders on hold can be excluded from the calculation, and you can define the number of days in the future to consider sales order lines as allocations for the purpose of replenishing inventory.

Once you've selected your options and generated the list of items that need to be replenished according to the parameters that you selected, on the Items Tab, you can cherry pick the items for which you want to create move tickets. Move ticket creation is accomplished with the simple push of a button.

Once the move tickets have been created, they can be viewed and selected for execution on the Move Tickets tab. Once again, you have the option of cherry picking the moves that you want to be completed. You can print ICKR, the Inventory Moves Pending Report, which lists all move tickets created in the program.

#### SPECIAL POINTS OF INTEREST:

Our offices will be closed November 22 and 23, 2007 for the Thanksgiving Holidays.

Support emergencies can call the after hours support number- 727-772-8288 over the holidays.

Our staff wishes you a Happy Thanksgiving!!

### New features in Batch Shipping

We've added even more new features to batch shipping to allow you more control over your inventory and shipments.

Using the new batch shipping parameters in program ILPM, Plant Code Maintenance, you can set up your system to only generate move tickets to support actual shipments. When the new Use ICRC Move Tickets flag is checked and items are shipped, move tickets will only be generated for the quantity shipped on the sales orders. If there are multiple shipments of the same item, those quantities will be consolidated onto a single move ticket. The inventory moves are completed automatically, and are included on the report when you run program ICKR, Inventory Moves Pending Report.

Other new features include the ability to modify the background batch shipping parameters in program ILPM, Plant Code Maintenance, and the new shipment statistics section which displays the statistics from the last batch shipping run, including the start and end time, number of orders processed, and the dollar value of the orders processed. The Accumulated Totals include the total number of orders and value of the orders shipped through batch shipping since the last time the totals were reset.

For more information on these and other new features, see the NDS Online Help, or contact your NDS Project Manager today!
